Sizes 6-8, 9-12

Quantity per carton 75

Fabric Composition:
Main fabric: 38% merino wool, 38% polypropylene, 23% nylon polyamide, 1% elastane

EXPERT KIWI WAIST PACK

CEX001
One Size

Quantity per carton 24

Fabric Composition:
Main fabric: 100% recycled polyester | **Coating:** PU |
Lining: 100% recycled polyester | **Strap webbing:** 100% nylon polyamide

RATING AND DECORATION GUIDE

We know you need products you can rely on. That's why we test each and every one of ours to the highest standards, enabling you to buy with confidence.

Y Resistance to water penetration class (waterproofness)
Y Water vapour resistance class (breathability)
R Readymade garment rain tower test (optional)*
 * X is the value given if the product has not been subjected to this test.

EN343

EN343 is the European Standard that specifies requirements and test methods for the materials and seams of protective clothing against the influence of precipitation (e.g. rain, snowflakes, fog and ground humidity). Waterproofness and Water vapour resistance are the essential properties which are tested.

The top number refers to the Waterproof level of which there are 3 classes. Class 3 being the highest level of waterproof protection.

The bottom number refers to the level of Breathability level of which there are 3 classes. Class 3 being the highest level of breathability.

EN ISO 20471

EN ISO 20471 is the international standard that outlines the requirements for high-visibility workwear for employees in high-risk areas.

EN ISO 20471 is divided into three classes, depending on the risk zone you work in and how well the product is able to protect the employee.

The number refers to the level of class that the garment has been tested to and passed. There are 3 classes for this, class 3 being the highest level of high-visibility workwear with the most fluoro-material and reflectors.

EN14404

EN 14404 is the European standard that sets requirements for knee pads to best protect the user's knees. The requirements test different elements of the knee pads to ensure the wearer is comfortable while kneeling for long periods, the ability to absorb impact and stop sharp objects penetrating the area.

RIS-3279-TOM

RIS-3279-TOM is a high-visibility standard that only applies to the rail industry in the UK. This standard ensures that rail workers on or near the trackside are sufficiently visible to trains approaching at speed or any other traffic.

ID-Reflection

When safety counts, our Intelligent Directional Reflection technology will ensure you're seen from all angles. Our angled chevrons allow others to know if you're facing toward or away from them at a glance, increasing safety in low light.

All Regatta products can be embroidered or printed with your branding, making it easy to showcase your identity in any workplace or promotional environment.

EMBROIDERY

Perfect for hardwearing products that will be washed frequently. Most items can be embroidered, but the best results are achieved using thicker stitching on durable fabrics such as fleece. Please note that waterproof garments can be compromised around the embroidered area, reducing overall water resistance.

SCREEN

Ideal for large runs, giving a clean, crisp finish to your image or logo. Most jackets and softshell products are suitable for screen printing, but we don't recommend this method on fleece or on products that can be damaged by high heat.

DTF (Direct to Film)

The best option for detailed images or logos, giving a clear and accurate reproduction of your artwork on the garment. DTF can be applied to most products, but works best on jackets and softshells. We don't recommend using DTF on fleece or on products that can be damaged by high heat.

CUT OUT TAG

All Regatta Professional products are now free from external branding and feature a cut-out back neck label.

- We do not recommend embroidering waterproofs as this punctures the fabric, reduces waterproof performance and invalidates the guarantee.
- Heat-press testing was conducted between 140–170 degrees Celsius.
- We recommend always using a Teflon sheet when heat-pressing to protect the garment.
- We recommend using opaque / block-out vinyls to help prevent dye migration. For best results, use a dye blocker when screen printing.
- Always seek expert advice before decorating the garment.
- Regatta takes no responsibility for the decoration of garments or any resultant damage.
- All lined garments have decoration access.
