CLOTHING
THAT
WORKS

TODAY &
TOMORROW

REGATTA[®] PROFESSIONAL[®]

Born from the UK's biggest outdoor clothing brand, Regatta Professional has the trusted expertise to deliver Clothing That Works – combining durability, comfort and performance to meet the demands of every job.

Why Regatta Professional?

Trusted since 1981

Over 40 years of delivering exceptional value and reliable workwear.

Designed to perform

Built for protection, comfort and performance – whatever the environment.

Industry leader

Supplying trades, construction, industrial sectors and promotional business needs with trusted solutions.

Extensive product range

From technical jackets and midlayers to hi-vis, durable legwear and safety footwear.

Driven by expertise

Powered by deep product knowledge and outdoor passion to deliver innovative workwear.

CLOTHING
THAT
WORKS

TODAY &
TOMORROW

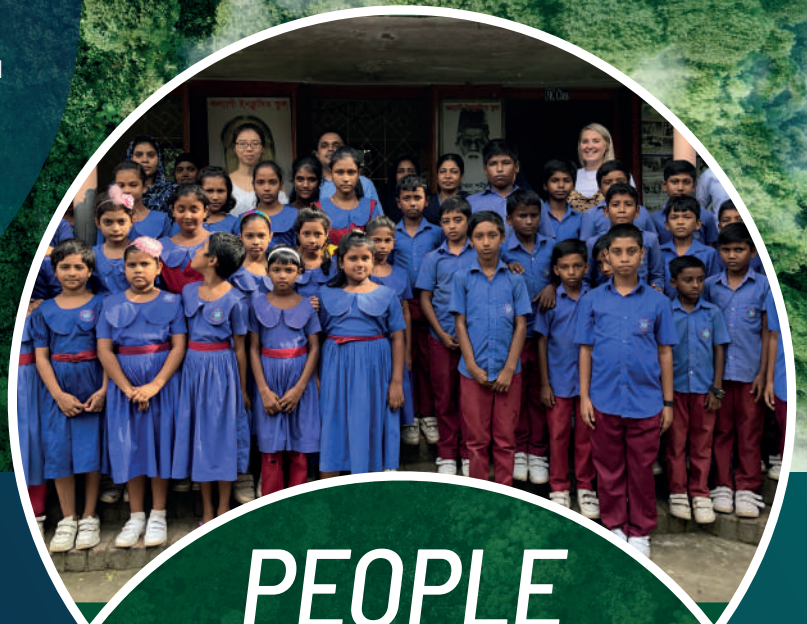

OUR GOAL IS FOR 70% OF OUR POLYESTER
FABRICS TO BE MADE FROM RECYCLED
CONTENT BY 2030. CURRENTLY, OVER 40% OF
THE POLYESTER WE USE IS RECYCLED, AND
WE WORK ONLY WITH GRS-CERTIFIED FABRIC
MILLS TO ACHIEVE THIS.

PURPOSE

The Regatta Groups corporate responsibility memberships showcase our commitment to fair labour, sustainability, and environmental responsibility. Through the Ethical Trade Initiative, we are committed to providing good, safe working conditions to all workers within our supply chain.

The Sustainable Apparel Coalition guides us in reducing our environmental impact, and we use the Higg Index to ensure accountability for our social and ecological practices.

Our alignment with the UNFCCC reflects our active role in global climate change efforts, and all of these partnerships underscore our brand's dedication to responsible business practices, highlighting that ethics and sustainability are at the heart of what we do.

PEOPLE

For over 10 years the Regatta Group have supported a primary school in the rural Savar area of Dhaka, Bangladesh. The school offers 260 children a safe learning environment, hot meals every day, access to an education and a chance to reach their full potential.

In our factories in Bangladesh we run a Health and Education Programme, facilitated by a local NGO, aimed at women on health, hygiene, nutrition and financial awareness in a safe working environment.

In 2025 one of our partner factories completed a female empowerment and progression programme aiming to upskill workers and improve gender equality. Selected women were promoted from sewing operators to supervisors following the programme.

OUR MISSION: TO SELL GREAT
QUALITY, RESPONSIBLY
SOURCED WORKWEAR –
WELL-DESIGNED,
WELL-PRICED AND
WELL-MARKETED.

PLANET

Sustainability is ingrained into our Group operations, and we have committed to net zero emissions by 2050. Our default method of transport is by sea when bringing our products to market.

In the UK and Poland our DC operations keep road and truck usage to a minimum through close proximity to port. We support electric vehicles for both company cars and our employees through an EV salary sacrifice scheme.

Our UK operations have solar installations in line with our commitment to reduce emissions. Our Group completes the CDP report to track and monitor our emissions, proudly achieving grade B last year.
www.cdp.net/en

**OUR TARGET BY 2030 IS TO
REDUCE SCOPE 1 & 2 EMISSIONS
BY 50% WITH 2019 AS THE
BASELINE.**

PRODUCT

In 2020, we launched a range of products made from 100% recycled polyester fibres, sourced from Global Recycled Standard (GRS) certified fabric mills.

Our strategy has since repositioned to incorporate recycled fibres or Better Cotton into all of our products and packaging. For our products, this applies whether they use synthetic or natural fibres. Embracing the ethos of the Better Cotton Initiative, we contribute to the global movement for the largest cotton sustainability programme in the world, reinforcing our commitment to responsible and ethical business practices.

Our dedication to product performance and safety is maintained through our own quality assurance programme, adherence to REACH regulations, and a rigorous testing procedure on all components used every season.

RECYCLE.me
CIRCULAR CLOTHING

Introducing the Recycle.me range.

Designed to be recycled, the industry-leading five-piece collection comes in two versatile colourways. Ready for branding, it delivers on quality and durability without compromise.

"COMMITTED TO SUSTAINABILITY, WE'RE LAUNCHING A RECYCLABLE, CIRCULAR CLOTHING RANGE THAT EMPOWERS CONSUMERS TO CHOOSE RESPONSIBLY, WITHOUT SACRIFICING STYLE OR QUALITY."

“In the UK alone, 300,000 tonnes of textile items are discarded into household waste, including polyester.

Up until now, polyester that had no useful life left would have been disposed of. With this project, we can now save that waste and return it to supply chains.”

Source: Tim Cross, CEO of Project Plan B

Circular Textiles Foundation (CTF)

The CTF are on a mission to lower the impact of clothing by designing it so it can be recycled. They are the only UK organisation to offer verification and certification in garment recyclability. Our Recycle.me range has been awarded their 'Infinitee' mark, providing third party assurance the products have been designed to be recycled.

Salvation Army Trading Company (SATCoL)

SATCoL is the largest charity-owned textiles collector in the U.K actively working to support organisations reduce their carbon footprint and combat climate change. We've partnered with SATCoL to implement a free tuckback scheme for customers of our Recycle.me range.

Project Re:Claim

Project Re:claim is the UK's first polyester recycler designed for fibre-to-fibre. They transform post-consumer textile waste into rPET pellets that can be spun back into yarn. Our Recycle.me range uses 100% polyester mono-fibre fabric and trims to ensure it can be recycled through their mechanical recycling system.

How to recycle your garments:

1. Scan the QR code inside the garment
2. Download your free shipping label
3. Drop it off at your nearest drop-off point

A photograph of two construction workers in orange safety gear. The worker in the foreground is wearing a blue hard hat and holding a power drill. The worker in the background is wearing a white hard hat. They are standing in a construction site with concrete walls and pipes.

RATING AND DECORATION GUIDE

We know you need products you can rely on. That's why we test each and every one of ours to the highest standards, enabling you to buy with confidence.

Y Resistance to water penetration class (waterproofness)
Y Water vapour resistance class (breathability)
R Readymade garment rain tower test (optional)*
 * X is the value given if the product has not been subjected to this test.

EN343

EN343 is the European Standard that specifies requirements and test methods for the materials and seams of protective clothing against the influence of precipitation (e.g. rain, snowflakes, fog and ground humidity). Waterproofness and Water vapour resistance are the essential properties which are tested.

The top number refers to the Waterproof level of which there are 3 classes. Class 3 being the highest level of waterproof protection.

The bottom number refers to the level of Breathability level of which there are 3 classes. Class 3 being the highest level of breathability.

EN ISO 20471

EN ISO 20471 is the international standard that outlines the requirements for high-visibility workwear for employees in high-risk areas.

EN ISO 20471 is divided into three classes, depending on the risk zone you work in and how well the product is able to protect the employee.

The number refers to the level of class that the garment has been tested to and passed. There are 3 classes for this, class 3 being the highest level of high-visibility workwear with the most fluoro-material and reflectors.

EN14404

EN 14404 is the European standard that sets requirements for knee pads to best protect the user's knees. The requirements test different elements of the knee pads to ensure the wearer is comfortable while kneeling for long periods, the ability to absorb impact and stop sharp objects penetrating the area.

RIS-3279-TOM

RIS-3279-TOM is a high-visibility standard that only applies to the rail industry in the UK. This standard ensures that rail workers on or near the trackside are sufficiently visible to trains approaching at speed or any other traffic.

ID-Reflection

When safety counts, our Intelligent Directional Reflection technology will ensure you're seen from all angles. Our angled chevrons allow others to know if you're facing toward or away from them at a glance, increasing safety in low light.

All Regatta products can be embroidered or printed with your branding, making it easy to showcase your identity in any workplace or promotional environment.

EMBROIDERY

Perfect for hardwearing products that will be washed frequently. Most items can be embroidered, but the best results are achieved using thicker stitching on durable fabrics such as fleece. Please note that waterproof garments can be compromised around the embroidered area, reducing overall water resistance.

SCREEN

Ideal for large runs, giving a clean, crisp finish to your image or logo. Most jackets and softshell products are suitable for screen printing, but we don't recommend this method on fleece or on products that can be damaged by high heat.

DTF (Direct to Film)

The best option for detailed images or logos, giving a clear and accurate reproduction of your artwork on the garment. DTF can be applied to most products, but works best on jackets and softshells. We don't recommend using DTF on fleece or on products that can be damaged by high heat.

CUT OUT TAG

All Regatta Professional products are now free from external branding and feature a cut-out back neck label.

- We do not recommend embroidering waterproofs as this punctures the fabric, reduces waterproof performance and invalidates the guarantee.
- Heat-press testing was conducted between 140–170 degrees Celsius.
- We recommend always using a Teflon sheet when heat-pressing to protect the garment.
- We recommend using opaque / block-out vinyls to help prevent dye migration. For best results, use a dye blocker when screen printing.
- Always seek expert advice before decorating the garment.
- Regatta takes no responsibility for the decoration of garments or any resultant damage.
- All lined garments have decoration access.

TECHNICAL GUIDE

ISOTEX 10000 ISOTEX STRETCH 10000

Our most advanced wet-weather protection, offering waterproof, breathable and windproof performance for active use.

A waterproof membrane prevents external moisture from leaking in to a minimum of 10,000mm water column, known as hydrostatic head.

A breathable membrane allows water vapour to escape from the inner garment, with a minimum of 10,000g of water vapour passing through each square metre of fabric over a 24-hour period (g/m²/24h).

Durable water-repellent technology applied to the outer fabric repels moisture and prevents it from gathering on the surface of the garment. Stretch yarns give greater freedom of movement for active use.

WATER REPELLENT

Water-repellent garments use our durable water-repellent technology to repel moisture and prevent it from gathering on the surface of the garment. This involves a coating applied to the outside of the fabric, which causes water to bead and roll off when it comes into contact with the material.

Water-repellent does not mean waterproof, but it is the first layer of protection, helping garments perform better outdoors.

THERMO GUARD

Thermoguard insulation traps air in its synthetic sheets of fibres for warmth and comfort. Quick drying and water-repellent, its easy-care properties will keep you warm even when wet.

HYDRA FORT 5000

Our original wet-weather protection, offering waterproof and windproof performance for everyday outdoor use. A waterproof membrane or coating prevents external moisture from leaking in to a minimum of 5000mm water column, known as hydrostatic head.

Durable water-repellent technology applied to the outer fabric repels moisture and prevents it from gathering on the surface of the garment.

SOFTSHELL XPT SOFTSHELL

A softer, more versatile alternative to a waterproof outer shell.

Our 2-layer bonded softshell fabric comprises a tightly woven outer fabric with water-repellent and windproof performance, and a soft, breathable inner fabric for comfort and warmth.

Our 3-layer softshell XPT fabric includes a waterproof and breathable membrane sandwiched between the fabric layers for full weatherproof performance.*

*As 3-layer fabrics feature a membrane, they are waterproof and windproof, but garments do not include taped seams, so they can only be labelled as water-repellent.

WARM LOFT

Warmloft insulation is our premium synthetic down. It traps air in its clusters of loose, lofty fibres and guarantees to keep you warm.

It's highly compressible and soft to the touch, with quick-dry and water-repellent properties to keep you cosy even when wet.

WATERPROOF TAPED SEAMS

Our waterproof garments have a layer of tape applied on the inside of the garment along the stitched seams.

The tape has the same waterproof performance as the fabric it's applied to, creating a waterproof seal over the stitching holes formed when the garment is sewn together.

Taped seams are the final element that allow us to label our garments as 'fully waterproof', alongside waterproof membranes and our durable water-repellent technology.

WINDPROOF

Windproof fabrics are typically constructed from multiple layers, with a tightly woven outer surface designed to prevent air penetration. The layers and the construction retain heat, offering insulation against gusts of wind while still allowing breathability.

BAMBOO PROTECT

Bamboo fibres have natural antibacterial properties that help prevent odour and keep clothing fresh for longer.

COMFORTLITE

Crafted with a high cotton content for next-to-skin softness and all-day comfort. The cotton sits on the inside for a gentle feel, while the durable polyester outer layer meets fluorescent colour requirements and ensures long-lasting performance.

Our cotton is sourced through the Better Cotton initiative, the world's leading cotton sustainability programme.

Their mission is to help cotton-growing communities survive and thrive while protecting and restoring the environment.

Our hardwearing and reliable fabric is designed to withstand the everyday wear and tear of the workplace.

Durable, abrasion-resistant yarns and water-repellent technology ensure performance in the toughest conditions.

SYMMETRY FLEECE

Comfort and quick-drying fleece technology with an anti-pill finish make it durable and long-lasting.

THERMO-REFLECT

Our ThermoReflect technology uses tiny silver dots to reflect body heat back to the wearer. Found in our premium jacket linings, it offers the ultimate in heat retention.

HIGH REACH

Our high-reach technology includes an underarm gusset construction which allows for the maximum range of movement and unrestricted flexibility. These garments have you covered on the job.

COOLWEAVE

Made from 100% polyester with a special airflow construction to keep you cool and comfortable.

It quickly draws moisture away from the skin to the exterior of the fabric where it evaporates.

CORDURA[®] Fabric

Cordura[®] fabric offers industry-renowned tear and abrasion resistance with long-lasting durability, ideal for areas of high use where extra protection is required.

EXTOL STRETCH

Our stretchiest fabric technology features bounce-back recovery.

This ergonomic, quick-drying fabric prevents windchill, providing comfort and freedom of movement for active wear.

THERMOGEN

Our heated technology garments are lined with an electronically powered copper heating zone, powered by a battery pack which sits within an inside pocket.

On a full charge, you can expect up to two hours' worth of continuous heating. The battery is USB-powered and is sold separately.

Reinforced triple-stitched seams give extra strength to garments that need to work hard.

BRITELIGHT

Our Brite Light garments feature torch technology in the sleeve, which displays three different brightness settings to light the way when visibility fades.

Operated via a push-button, the torch is easily detachable to allow for garment washing, and is rechargeable via USB. A full charge on the maximum setting (80 lumens) will last for 2 hours, while the lowest setting will run for 8 hours.

RFID

Our RFID protective pocket lining technology contains metal fibres, which interfere with and shield signals from scanning devices.

EXTENDABLE HEM

Our innovative hem feature allows users to easily extend the length of the garment by offering two options: a standard size and a length that can be extended by up to 5 cm.
